The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antiarthritic; antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral;

The polymuclectides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polymuclectides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytric activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antiboddies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ovarian cancer; breast cancer; tumour; reproductive system disorder; inferrility; pregnancy disorder; anovulation; polycystic ovary syndro PCOS; ovarian cyst; dysmenorrhoea; endocrine disorder; infection; infunatory condition; inmune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC polynucleotides, antibodies against human ovarian antigen; of orderes south control of the use of ovarian antigen polynucleotides and polypeptides in diagnosing, cc treating, prognosing or preventing various ovary and/or breast-related cc disorders. Such conditions include ovarian cancer and breast cancer, and control of ovarian or breast origin, reproductive system cc disorders (e.g., infertility, disorders of pregnancy, anovulation, cc polycytic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine cd disorders, infections (e.g., chlamydia, HIV, toxphasmosis, and toxic polycytic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine communication, immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), crespiratory disorders, neurological disorders, gastrointestinal disorders, crespiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and cc polynucleotides may also be used in screening for compounds which communication of individuals and in forensic analysis, and the conjugation of individuals and in forensic analysis, and the conjugation of individuals and in forensic analysis, and the presents a human ovarian antigen of the invention.

Note: The sequence data for this patent did not form part of the printed confiction, but was obtained in electronic format directly from WIPO cat fro, who int/mih/inhal expenserses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for assessing whether a patient is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see ACC50076 to ACC5034 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a significant increase in the level of expression of the marker in the patient is ample and the normal level of expression of the marker in the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cytostatic activities and can be used in gene therapy. The method is useful for diagnosing and treating breast

Alternatively, the complexes may comprise an MHC class II alpha chain, an MHC class II beta chain, and an antigenic peptide bound in the MHC groove. The complexes are linked to the carboxyl terminus of the antibody. The compounds of the invention can be used as a vaccine to modulate an immune response. The compounds of the invention are useful for treating: hyperproliferative disorders (e.g. neoplasms and hypergammaglobulinaemia); viral infections (e.g. hepatitis and meningitis); bacterial infections (e.g. tuberculosis and gingivitis); parasitic infections, autoimmune diseases (e.g. Hashimoto's disease, autoimmune diseases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complexes, used to modulate immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zauderer M,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Graves' disease and rheumatoid arthritis); allergic reactions/conditions (e.g. asthma). The compounds of the invention may also be used in the treatment of organ rejection or graft-versus-host disease (GMID). The present sequence represents C35 protein, this protein is differentially expressed in human breast cancer cells. In one embodiment of the invention, antigenic peptides derived from the C35 protein can be used to promote an immune response against a cancerous cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a compound which contains one or more major histocompatibility complex (MHC)-peptide complexes, and an antibody specific for a cell surface marker. The complexes comprise an MHC class
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 16; Fig 7; 166pp; English

Polypeptide-human protein 12.63 containing site-specific recombinase characteristic sequence fragment and polynucleotide for coding it -

The Claim 1;

invention relates tein 12.63 (ABP5856

to human site-specific recombinase motif-containing

Chinese

protein 12.63 (ABP58560) and nucleic acids encoding it (ABZ25755). The protein has a molecular weight of 12.63 kb. The invention also relates the protein and the recombinant production of the protein, an antagonist of the protein, and the use of the protein, gene and antagonist in the respectific applications. Site-specific recombinase motif-containing protein 12.63 can be used in the treatment of a variety of diseases such as cancer and HIV (human immunodeficiency virus) infection. The present sequence represents human site-specific recombinase motif-containing

These are useful in gene therapy, particularly for treat wounds, burns or ulcers, Alzheimer's disease, Huntington's disease, amyotrophic lateral sclerosis, autoimmune disorders, cancer or inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABP43544-ABP43989 represent polypeptides encoded by polynucleotides

The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5'

CC The invention comprises a compound which contains one or more major CC histocompatibility complex (MHC)-peptide complexes, and an antibody CC specific for a cell surface marker. The complexes comprise an MHC class CC latha chain, a beta-2 microglobulin molecule and an antigenic peptide bound in the MHC groove. Alternatively, the complexes may comprise an MHC class II beta chain, and the MHC groove. The complexes may comprise an MHC class II beta chain, and an antigenic peptide bound in the MHC groove. The complexes are linked to the carboxyl terminus of the antibody. The compounds of the invention can be used as a cc vaccine to modulate an immune response. The compounds of the invention car useful for treating: hyperproliferative disorders (e.g. neoplasms and hypergrammaglobulinaemia); viral infections (e.g. tuberculosis and gingivitis); parasitic infections, autoimmune diseases (e.g. Hashimoto's disease, cc Graves' disease and rheumatoid arthritis); allergic reactions/conditions (e.g. asthma). The compounds of the invention may also be used in the ctreatment of organ rejection or graft-versus-host disease (GVHD). The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           នន្តន្តន្តន
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
CC The invention comprises a compound which contains one or more major CC histocompatibility complex (MHC)-peptide complexes, and an antibody CC specific for a cell surface marker. The complexes comprise an MHC class CI alpha chain, a beta-2 microglobulin molecule and an antigenic peptide CC bound in the MHC groove. Alternatively, the complexes may comprise an MHC class II beta chain, and chain, an MHC class II beta chain, and an antigenic peptide bound in the MHC groove. The complexes are linked to the carboxyl criminus of the antibody. The compounds of the invention can be used as a CC vaccine to modulate an immune response. The compounds of the invention CC are useful for treating: hyperproliferative disorders (e.g. neoplasms and CC hypergammaglobulinaemia); viral infections (e.g. hepatitis and gingivitis); meningitis); bacterial infections (e.g. tuberculosis and gingivitis); CC parasitic infections; autoimmune diseases (e.g. Hashimoto's disease, CC Graves' disease and rheumatoid arthritis); allergic reactions/conditions (e.g. asthma). The compounds of the invention may also be used in the treatment of organ rejection or graft-versus-host disease (GVHD). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 10

                                                                                                           immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present a
                                                                                                                                                                      The present invention relates to human C35 (see AAG78997). C35 is tumour antigen that is overexpressed in human breast and bladder carcinoma. C35 is thought to be a promising candidate for tumour

G35 peptide; major histocompatibility complex; HLA class II epitope; MHC-peptide complex; MHC, human; MHC class I alpha chain; beta-2 microglobulin; MHC class II alpha chain; MHC class II beta chain; vaccine; immune response modulation; hyperproliferative disorder; neoplasm; hypergammaglobulinaemia; viral infection; hepatitis; meningitis; bacterial infection; tuberculosis; gingivitis; parasitic infection; autoimmune disease; Hashimoto's disease; garaves' disease; rheumatoid arthritis; allergy; asthma; organ rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                                                                                                                                                                                              Human C35 peptide (amino acids 57-75), predicted HLA class II epitope
                                                                                                                                                                                                                                                                                                                              08-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                        AAG77901;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  meningitis); bacterial infections (e.g. tuberculosis and gingivitis); parasitic infections; autoimmune diseases (e.g. Hashimoto's disease, Graves' disease and rheumatoid arthritis); allergic reactions/conditions (e.g. asthma). The compounds of the invention may also be used in the treatment of organ rejection or graft-versus-host disease (GVHD). The present sequence represents amino acids 57-75 of the human C35 protein, which is differentially expressed in breast cancer cells. The present sequence is a predicted C35 human leukocyte antigen (HLA) class II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         specific for a cell surface marker. The complexes comprise an MHC class I alpha chain, a beta-2 microglobulin molecule and an antigenic peptide bound in the MHC groove. Alternatively, the complexes may comprise an MHC class II alpha chain, an MHC class II beta chain, and an antigenic peptide bound in the MHC groove. The complexes are linked to the carboxyl terminus of the antibody. The compounds of the invention can be used as a vaccine to modulate an immune response. The compounds of the invention are useful for treating: hyperproliferative disorders (e.g. neoplasms and hypergammaglobulinaemia); viral infections (e.g. hepatitis and hypergammaglobulinaemia); viral infections (e.g. hepatitis and
                                                                                                                                                 Human; C35; cytostatic; gene therapy; vaccine; tumour antigen; breast cancer; bladder cancer; tumour immunotherapy; epitope; major histocompatibility complex binding peptide; MHC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises a compound which contains one or more major histocompatibility complex (MHC)-peptide complexes, and an antibody specific for a cell surface marker. The complexes comprise an MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC complexes comprise and MHC comprise and MHC complexes comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise and MHC comprise a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human C35 (see AAG78997). C35 is a nove tumour antigen that is overexpressed in human breast and bladder carcinoma. C35 is thought to be a promising candidate for tumour immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                                                                                                                                                                                                                                             C35 peptide; major histocompatibility complex; HLA class II epitope; MHC-peptide complex; MHC, human; MHC class I alpha chain; beta-2 microglobulin; MHC class II alpha chain; MHC class II beta chain; vaccine; immune response modulation; hyperproliferative disorder; neoplasm; hypergammaglobulinaemia; viral infection; hepatitis;
                                                                                                                                                                                                                                                                                                                                                                                                          Human C35 peptide (amino acids 21-35), predicted HLA class II epitope

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises a compound which contains one or more major CC histocompatibility complex (MHC) peptide complexes, and an antibody CC specific for a cell surface marker. The complexes comprise an MHC class CC I alpha chain, a beta-2 microglobulin molecule and an antigenic piptide cound in the MHC groove. Alternatively, the complexes may comprise an MHC Class II beta chain, and an antigenic comprise an MHC class II beta chain, and an antigenic comprise an MHC class II beta chain, and an antigenic complexes are linked to the carboxyl creations of the antibody. The compounds of the invention can be used as a cockine to modulate an immune response. The compounds of the invention are useful for treating: hyperproliferative disorders (e.g. neoplasms and CC vaccine to modulate an immune response. The compounds of the invention are seful for treating: hyperproliferative disorders (e.g. neoplasms and CC useful infections; autoimmune diseases (e.g. hashimoto's disease (C parasitic infections; autoimmune diseases (e.g. hashimoto's disease; (C graves' disease and rheumatoid arthritis); allergic reactions/conditions (e.g. asthma). The compounds of the invention may also be used in the C treatment of organ rejection or graft-versus-host disease (GVID). The C which is differentially expressed in breast cancer cells. The present consideration of the invention of the luman C35 protein, which is differentially expressed in breast cancer cells. The present consideration of the invention of the luman C35 protein, and consideration of the luman C35 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                       Sequence
                                                                                                                                                immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                                                                                                                                                                                                                   The present invention relates to human C35 (see AAG78997). C35 in tumour antigen that is overexpressed in human breast and bladder carcinoma. C35 is thought to be a promising candidate for tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; C35; cytostatic; gene therapy; vaccine; tumour breast cancer; bladder cancer; tumour immunotherapy; e major histocompatibility complex binding peptide; MHC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to human C35 (see AAG78997). C35 is tumour antigen that is overexpressed in human breast and bladder carcinoma. C35 is thought to be a promising candidate for tumour

                                                                                                                                                                                                                                                                                                                                          immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to human C35 (see AAG78997). C35 is a tumour antigen that is overexpressed in human breast and bladder carcinoma. C35 is thought to be a promising candidate for tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel C35 polypeptides and C35 genes useful in immunogenic compositions and vaccines, for inducing antibody and cell-mediated immunity against target cells, such as tumor cells that express C35 gene -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; C35; cytostatic; gene therapy; vaccine; tumour antigen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human C35 (see AAG78997). C35 is a nove tumour antigen that is overexpressed in human breast and bladder carcinoma. C35 is thought to be a promising candidate for tumour immunotherapy, in immunogenic compositions and vaccines, to induce antibody and cell-mediated immunity against target cells such as tumour cells that express C35 genes. The present sequence is a C35 peptide epitope. This peptide is predicted to be a major histocompatibility complex (MHC) binding peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; C35; cytostatic; gene therapy; vaccine; tumour antigen; breast cancer; bladder cancer; tumour immunotherapy; epitope; major histocompatibility complex binding peptide; MHC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
